

Tell Me About Yourself — Interview Scripts

Narendra Kumar · Placement Prep · Practice daily out loud

Version A — Full Intro (90–110 seconds)

Best for: HR / first round — “Tell me about yourself”

*Good morning, sir/ma'am. I'm **Narendra Kumar**, from Andhra Pradesh. I'm pursuing **B.Tech CSE at SRM University AP** with a CGPA of **8.51**, and I'm an **AWS Certified Cloud Practitioner**.*

I come from a simple family — my father is a farmer, my mother is a homemaker, and I have one elder brother. Their support is a big reason I keep pushing myself.

*In college, I focused on building real products, not only theory. My main project is **Nyay Sahayak**, an AI legal assistant that uses **RAG** to answer questions from the **Bharatiya Nyaya Sanhita**, with role-based access and IPC–BNS mapping for **550+ sections**. I also built **GeoVerse AI**, a world-exploration app with live APIs and AI itineraries, and **AWS Intelligence Loop**, a serverless sentiment pipeline on AWS that processes **10,000+ records a day**.*

*Outside academics, I have done **six national hackathons**, which improved my teamwork and speed under pressure. My hobby is **nature photography** — I run an Instagram page for my photos. It trains my eye for detail, and I bring that same detail-check habit into debugging and UI work.*

I'm looking for a role where I can learn from strong engineers, grow in backend/full-stack or AI-backed products, and contribute from day one. Thank you.

Why this intro works

- Personal, but family part is short
- Each project has one clear point
- Hobby linked to a work skill (attention to detail)
- Ends with what you want + what you give

Version B — Short Tech Intro (60–75 seconds)

Best for: technical / coding rounds

*Hi, I'm **Narendra Kumar**, final-year CSE at SRM University AP, CGPA **8.51**, AWS Cloud Practitioner. I build with **Python, FastAPI, React, and AWS**. My strongest project is **Nyay Sahayak** — a production RAG legal assistant using ChromaDB and Groq, with role-based workflows and IPC↔BNS mapping. I've also shipped **GeoVerse AI** and an **AWS serverless sentiment pipeline** for 10k+ records/day. I enjoy turning ideas into working products, and I'm looking for an SDE / backend / full-stack role where I can keep learning and contribute.*

Delivery tips

- Smile once at the start
- Pause after each project name — don't rush
- Don't memorize like a robot — keep meaning, change small words
- If time is short, use Version B only

Practice checklist

- Version A under 2 minutes
- Version B under 75 seconds
- Can continue into Nyay Sahayak when they ask “tell me more”
